

Greetings from Wildervank (Wolter Daniels)

In the autumn of 2010 a modeller friend came to visit. He mainly worked (and still does) in cardboard. This inspired me to build models of a garden shed in scale O and simultaneously in HO, in cardboard and styrene. Of course, scrap materials were used.

The inspiration came from a family photo showing part of the prototype shed, which was used by my Dad to store his NSU Max motorcycle in around 1957.

No carpenter was involved in building the real thing. My grandfather (whose name I inherited) worked at a sawmill, and rejected wood was sold to staff. This gradually created an empire of wooden buildings in the area around the mill.

The third photo shows the HO scale shed on my photo board during the arrival of St Nicholas.
